Last Modified 7th May 2021

Highlights of Changes in 5.0.29.162

ID: 9199 Support to key table no instead of selecting from floor plan.

User now can manually input the table no instead of searching if you have a lot of section. This to ensure that the staff that taking the order does not waste much time searching for the table.

The screenshot displays a POS system interface for a restaurant. At the top left, there is a 'Table No' input field with a keyboard icon. Below it, the 'Section 1' label is visible. The main area shows a floor plan with several tables represented by colored boxes. Each table box contains its name, dimensions, and price. For example, 'Table 1' is (389h 25m) for RM21.90, 'Table 2' is (487h 19m) for RM22.00, 'Table 3' is (191h 45m) for RM15.84, 'Table 4' is (195h 18m) for RM16.20, and 'Table 5' is (195h 5m) for RM18.00. There are also boxes for '01', '06', and 'TA'. On the right side, there is a sidebar with the 'autocount' logo and a summary of financials: Total: 0.00, Paid: 0.00, Change: 0.00. Below the summary are several buttons: View Order Listing, Take Away, Reprint Last Receipt, Reservation, Change Table, Mark Served, Share Table, Join Table, Clear Join Table, and Close. At the bottom of the interface, there is a row of status filters: Empty, Seated, >= 5 min, >= 15 min, Served, Bill Printed, Reserved, Share Table, and Join Table.

ID: 9200 Support batch print at pos transaction viewer.

Some of the user auditor may request receipt during their audit. User found it troublesome to reprint individual transaction every time they request for it. Therefore, we have added a batch print feature at pos transaction viewer to ease your trouble.

To batch print, navigate to Backend **Point Of Sales > Pos Transaction Viewer > Find**

Do your filtering and search then print. Also remember to check those boxes for batch print.

Record 797 of 799

ID: 9404 Provide an option “Always follow Terminal Settings Service Charge %” at Table Design. Previous version, user must set 1 by 1 table if somehow user wish to change their service charges rate. Now with this option, user can just change the default service charge and all table will follow accordingly. Imagine editing for more than 30+ table.

To do so, go to **More Function > Settings > Table Design**. Right click on the table.

Enhance and optimize synchronization

1. Optimize speed sync and full sync speed.

The synchronization speed had been significantly improved.

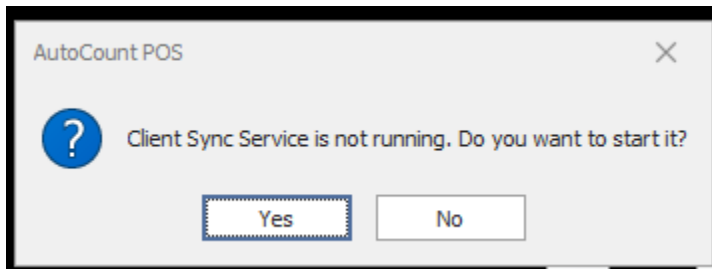

2. Optimize POS window services.

Instead of 2 services that control license and auto sync separately, we now only have 1 services that control both function.

3. Notify user to start services during login if services is not running.

Somehow some pc will not auto start auto sync services which resulted sync is not up to date. With this feature, user do not need to start the services manually anymore.

4. Server side trigger speed sync.

User now can trigger speed sync from server. This will ensure you all transaction is up to date before you do your report inquiries.

The screenshot shows the 'POS Server Monitor Status' application window. At the top, there is a menu bar with options like 'File', 'G/L', 'A/R', 'A/P', 'Inquiry', 'Stock', 'Sales', 'Purchase', 'Bonus Point', 'Point of Sale', 'General Maintenance', 'Tools', 'Tax', 'Window', and 'Help'. Below the menu is a yellow header with the title 'POS Server Monitor Status' and a help icon. A hint message reads: 'Hint: You may check POS server monitor status here.' Below the hint are four buttons: 'Refresh', 'Edit Client Sync', 'Run All Client Sync' (highlighted with a red box), and 'Close'. There is also an 'Empty Master Code' button on the right. The main area contains a table with columns: 'Client Server Name', 'Client DB Name', 'Version', 'Last Finish Sync Time', 'Terminal ID', 'Last Trans Finish Sync Time', 'Client Sync Name', and 'Client Sync Port'. The table is filtered by 'Location: HQ' and shows three rows of data. The first two rows have green background colors, and the third row has an orange background color. The status bar at the bottom indicates 'Record 1 of 3'.

5. POS B now can speed sync too.

Instead of using POS A to manually speed sync, POS B now can do it too. When POS B perform speed sync, it actually triggering POS A to do the sync.
